Healthcare.gov Lines of Code Comparison

LINES OF CODE FOR POPULAR SOFTWARE (IN MILLIONS)

SOURCES

Note: The Healthcare.gov line count is an unofficial stat from the New York Times article listed below. Many developers have reached out expressing skepticism toward the staggeringly large number.

1. Google Chrome - <https://www.ohloh.net/p/chrome>
2. Linux Kernel - <https://www.ohloh.net/p/linux>
3. Windows XP - <https://www.facebook.com/windows/posts/155741344475532>
4. Facebook.com (likely larger, does not include several backend components) - <http://www.quora.com/Facebook-Engineering/How-many-lines-of-code-is-Facebook>
5. OSX 10.4 - <http://www.engadget.com/2006/08/07/live-from-wwdc-2006-steve-jobs-keynote/>
6. Debian 5/packages - <http://debian-counting.libresoft.es/lenny/index.php?menu=Statistics>
7. Healthcare.gov - http://www.nytimes.com/2013/10/21/us/insurance-site-seen-needing-weeks-to-fix.html?pagewanted=2&_r=0
